1.0 Scope

The purpose of this document is to define our Environmental policy.

WT's Management is committed to develop and maintain working procedural standards, preservation of environment, health and safety management and quality management at all levels of the organisation. It acts in compliance with best practices relative to environmental safeguards and protection. The Management team is fully aware of the environmental implications of the company's activities in all its divisions. It also believes safeguarding the environment one of the key factor to business development and success.

3.0 Environmental Policy

We recognise that our operations have an effect on the local, regional and global environment.

As a consequence of this, the management is committed to continuous improvement in environmental performance and prevention of pollution, implementing the environmental policy throughout the company.

Our policy is communicated to the widest possible audience and is easy to understand by both internal and external interested parties.

WT is keen to meet customers' expectations and ensure that they are wholly satisfied with the products and services we supply and is therefore proud to be qualified to UNI EN ISO 9001 and UNI EN ISO 14001 certified standards.

Our policy sets out WT's general aim to promote fair, consistent and transparent services.

WT is committed to full cooperation with all authorities in order to meet legislative demands, and all standards, regulations and conditions which relate to the preservation of the environment, health and safety.

Our management will also have the authority to take disciplinary action against those employees who violate policies, procedures, programs, guidelines or rules related to WT's Environmental policy.

In an effort to realize these goals, the company and all employees are actively engaged in the following activities:

- Maintaining and implementing UNI EN ISO 9001 and UNI EN ISO 14001 standards.
- Preventing all types of environmental contamination (soil, air, water) through a constant review of our environmental performance (chemical analysis constantly performed, inside and outside the shop, to ensure emissions are under the law limit, reduce the atmospheric emissions using filters in critical activities (welding, painting), control and management of waste material)
- Promoting recycling activities
- Promoting the purchase of materials, parts, and packaging that are environmentally friendly (wooden packaging material is reused as possible)
- Involving our employees in the planning and implementation of our health and safety systems through guidelines and training courses (environmental/H&S training courses 2008)
- Complying with the relevant environmental legislation and regulations
- Cooperating with local authorities and the local community (meetings with local authorities to evaluate measures to reduce atmospheric emissions)

WT believes that the success of this policy is only achievable with the help and support of everyone, from the top levels of management, to the involvement of all employees in the company.
